

GENIUS

4 QUALITY EDUCATION

Organic and agroecological agriculture are on the rise, with the global organic products market surpassing \$100 billion in sales, and it is projected to continue growing. A study by the World Bank indicates that each additional year of education can increase agricultural income by 10%, highlighting how education directly impacts productivity.

What World Do You Want in 2030?

WHAT

Through the transformation of school garden products, the manufacturing of biocomposites, and the adoption of clean energies, we offer innovative and accessible solutions that demonstrate that an environmentally friendly lifestyle is possible and beneficial for everyone. We take pride in being an example of how collaboration, creativity, and commitment can transform not only our immediate environment but also the future of generations to come.

HOW

At AGROCEES, we are committed to working together with our school community and beyond to implement sustainable solutions that contribute to environmental preservation and the well-being of all. Through education in the garden, the manufacturing of ecological biocomposites, and the efficient use of renewable energies, we foster environmental awareness and the development of practical skills in young people. Our holistic approach aims to empower future generations to become committed change agents for a more prosperous and nature-respecting future

WHY

Our reason for being is to sow a sustainable future for humanity. We firmly believe in our power to generate meaningful and positive changes in our environment. We strive to inspire others to adopt responsible practices that promote harmony between people and the planet. Our purpose is to lay the groundwork for a future where sustainability is the fundamental pillar of our society.

Call to Adventure

In the vibrant city of High, a group of young individuals called the Genius Citizens grew restless due to the escalating environmental crisis. Frustrated by the absence of meaningful actions, they resolved to make a difference. During a discussion at school, they learned about an abandoned garden, once a symbol of prosperity but now overrun with weeds. This discovery sparked their mission to transform the garden into a model of sustainable agriculture.

Meeting with the Mentor

In their quest, they encountered Ayo, a wise and experienced farmer, and Terra, a passionate young environmentalist. Ayo shared with them his ancestral knowledge of regenerative agriculture, while Terra spoke to them about the importance of environmental education and the Sustainable Development Goals, particularly ODS 4: quality education. Together, the mentors inspired the Genius Citizens to dream big and adopt practices that would not only improve their garden but also benefit the community.

Tests and Enemies

However, the road was not easy. Facing resource shortages, resistance from some community members who did not believe in their vision, and even climate change, the Genius Citizens encountered numerous trials. But they did not give up; they worked together, using their ingenuity and creativity. They organized workshops to teach about sustainable agriculture, raised funds to enhance the garden, and began experimenting with new products and ecological biocompounds. With each small triumph, they gained more allies and began to show the community that a sustainable future was possible.

Return with the Elixir

After months of hard work, the garden flourished. Not only did it produce fresh and healthy food, but it also became an educational center for the community. With the support of Ayo and Terra, the Genius Citizens founded Agrocees, a company dedicated to sustainable agriculture. They returned to their school and community, sharing their knowledge and experience, inspiring others to adopt responsible practices and believe in the power of collaboration.
